TRANSFORMATION OF TECHNOLOGIES
OF DEMOCRATIC GOVERNANCE UNDER THE DEVELOPMENT
OF THE INFORMATION SOCIETY

In the process of state building in Ukraine, the formation of information society and the principles of cultural and civilizational identification of the state in the context of globalization, much attention should be paid to creating conditions for the implementation of power-appropriate social relationships of modern information and communication technologies (ICT). Because of these technologies, the relationship between members of public-private partnership can gain a new level, which has to promote accessibility, transparency and openness of government, which are the cornerstone principles of democratic governance in the country. However, as the experience of European countries shows during the implementation of reforms in the country, introduction of modern management techniques, technologies, public participation and other technologies based on the use of ICT, an important issue that requires a solution is the scientific study of approaches to processes of transformation of technologies of democratic governance in general.

The analysis of current publications suggests that the study technology of e-democracy is urgent now and requires further systematic development in the context of study of public administration in Ukraine. However, ideas are reflected in the reviewed scientific papers need their further development nowadays. In particular, we believe that the historical process of transformation of traditional democracy in electron determining the objective components of this process should be considered more detailed.

The aim of the article is to study the transformation process of technologies of democratic governance during the transformation of traditional democracy in electronic and defining objective components of this process.

In the conditions of information society the transformation of technologies of democratic governance, due to changing technology processing and dissemination of information, is going on. Modern power-social relations under such conditions require not only a «rebooting» in fact, but transformation on the technological level that provides new ways of processing management information under the formation, approval and

implementation of socially important decisions. In this context there is a need for further research of technologies of e-democracy, taking into account the dynamic formation of information society in Ukraine and the rapid development of information and communication technologies. The combination of these factors will transform the system of public administration on the principles of democratic governance in ways that are specific to e-government. Thus the key subjects of study, mastering and practical application of all subjects of public-social relations are: transformed objects and subjects of e-democracy; processes of interaction; virtual environment of e-democracy, its architecture and technical software.
